About the Ground Spike

The Ground Spike is a specially designed screwdriver optimized for use as a ground stake. In our extensive search for the best stake we found a modified screwdriver to be the optimal solution for this application.

The spike is easily inserted in a variety of ground types and remains securely positioned and is easily removed.
The shank is made of very corrosion resistant chrome plated steel. The handle is made of cellulose acetate which is the standard for durability and long-life.

*The Ground Spike meets 2020 TSA guidelines for carry-on items

Adjusting the Ground Spike fit Inside the Extension Tube

Time and various conditions may affect the fit between the Ground Spike and Extension Tube. Therefore the spike has been designed with an adjustment screw so that a snug but not excessively tight fit can be achieved. This adjustment can be made with a standard slotted head screwdriver.

If you have multiple Ground Spikes you can use the tip of another spike to adjust the screw.

*Meeting TSA Guidelines does Not guarantee the ability to place the Ground Spike in your carry-on in The US or abroad, however the total length of the ground spike is considered acceptable by TSA guideline concerning tools (in particular screwdrivers). Due to the fact that TSA issues guidelines and not rules we advise that the ground spike be placed in a checked bag to avoid possible confiscation.

How to Use Your Ground Spike

Inserting the Device
Hold the handle of the Ground Stake and firmly push into the ground. If additional control and leverage is desired, the Plamp Stake can also be pushed into the ground with Extension Tube (part# PP-320) attached.

Storing The device
Wipe dirt and debris from the Ground Spike. Remove the spike from the extension. Insert the spike into the extension as shown below until it is securely seated. The Ground Spike is now ready to be stored in your gear bag.
